## Short Description

IT Project management is the discipline of planning, organizing, motivating, and controlling

Information Technology Strategic Planning is a discipline within the Information Technology

This discipline focuses on ensuring an IT system conforms to the 4 C's of user interface design

This discipline focuses on an overall relationship between a customer and a service provider

Business analysis combines skills such as business requirements gathering, customer relationship

This discipline manages integration between on-premises systems inside an entity and outside

This discipline provides a service to install a given system, including integration and production

This discipline provides a service to write software according to technical specifications given

This discipline provides development and support activities specific to the Java programming

This discipline provides development and support activities specific to the PHP programming

This discipline provides design, development, review and support activities related to the code

This discipline monitors applications to ensure they continue to meet anticipated and desired

This discipline focuses on the design of strategic visions for the direction of security sections

This discipline focuses on developing and auditing policies designed to avert or mitigate risks

This discipline focuses on development of policies for the secrecy level classification of data

This discipline focuses on developing practices and technical mechanisms to secure an organization

This discipline focuses on taking the strategic security vision for an organization and business

This discipline focuses on managing mechanisms in which a customer proves their identity

This discipline provides services to transform data in one format to another dissimilar format

ing resources to achieve specific goals.

ogy and Information Systems domain and is concerned with development (control, conveyance, continuity, and coordination), ensuring that the provisions of an SLA (such as uptime, relationship management, and enterprise architecture to cloud

sourced/"cloud" services provided by another service provider.

uction migration of said system, ensuring it interoperates with existing systems, including debugging, testing, and documentation.

ing language and enterprise environment

ing language, MySQL RDBMS, and PHP/MySQL environment. Creation of IT Performance Metrics

ed benchmarks for performance and availability, and

ons and how to achieve the strategic visions for the company. Risk involved with cybersecurity threats, and to ensure data integrity and how to appropriately secure that data.

ganization's applications

ness requirement of a project and designing an architecture for access to IT systems, including user accounts and

nat

ed with making the planning process for information technology investments and decision  
context), and ensuring that the IT system is well adjusted to the business process and vice versa.  
uptime requirements, response times, etc) are met  
to determine efficient sets of requirements and architectural guidelines for projects

to provide a seamless and invisible user experience between the two

rates with the existing enterprise structure appropriately  
on how the system operates and how to deploy it

environment

to ensure they continue to meet business requirements

organization

to ensure organizational compliance with these policies

to ensure the security of a given system while meeting the business need  
and passwords, biometrics, access cards, and other mechanisms. This discipline also focuses

1-making a quicker, more flexible, and more thoroughly aligned process.

rsa

es on interoperability between different identity control mechanisms and establishing ti

rust between these systems so that one provider's access will be trustworthy to others (i

.e. federation).

## **Skill-Set**

### **Administrative Services**

- x IT Project management
- IT Governance
- x IT Strategic Planning
- IT Marketing and branding
- IT Costing and Rate Analysis
- IT CRM
- IT Physical Workspace Planning
- IT Asset Lifecycle Management
- x Usability Consulting
- Process/Service Improvement Coordinators
- x Service Level Agreement
- IT Portfolio Management
- Business Requirements Gathering
- x Business Analysts
- Business Process ENG/MGT and Assessment
- Technical Writer
- IT End-User Trainer
- Capacity Planning & Performance Specialist

### **Infrastructure**

- Enterprise Architecture
- Data Center Engineering for High Availability
- Enterprise Application and Desktop Virtualization
- x Integration between on-site services with cloud/managed servi
- Network Design and Security
- Identity management and Federation
- Enterprise messaging and/or E-Discovery
- VOIP and Unified Communications
- EDI/HL7 Messaging
- Network Assessment
- SOA Governance
- Complex system performance tuning
- Network Administrator
- Network Specialist

### **System and System Component Administration Services**

- Local Area network LAN Maintenance or Support

- Database analysis service
- Computer or network or internet security
- x System installation service
- System analysis service
- x Software coding service
- Mainframe administration services
- Wide area network WAN maintenance or support

This discipline provides development and support activities for various programming languages

This discipline provides development and support activities specific to UNIX Shells (bash, sh, etc.)

This discipline provides development and support activities specific to the JCL programming language

This discipline provides development and support activities specific to the Sybase PowerBuilder database

This discipline works with usability engineers to design useful, usability standard conforming user interfaces

This discipline provides development and support activities specific to the COBOL programming language

This discipline focuses on taking technical and business requirements and designing how to implement them

This discipline focuses on Grants/Projects/Contracts

This discipline focuses on Accounts Receivable/Billing

This discipline provides first layer support activities to individual customers, providing an initial point of contact

This discipline focuses on remediating cybersecurity threats, failures, and incidents, investigating root causes

This discipline focuses on designing, implementing, and testing responses to hypothetical cybersecurity threats

This discipline focuses on developing and auditing policies designed to avert or mitigate risk

This discipline provides in-depth analysis and auditing of system settings and functionality

This discipline focuses on studying current and developing new access control methodologies

This discipline focuses on intentionally trying to compromise the security systems of an organization

This discipline provides analysis of application code to look for potential vulnerabilities in the code

This discipline combines the various security disciplines in a holistic manner that is able to address the entire security posture

This discipline focuses on developing internal tools to aid in development, and maintaining them

This discipline focuses on maintaining internal tools that are used to manage and monitor infrastructure

This discipline focuses on installing physical network cabling infrastructure and terminating it

This discipline focuses on installing physical hardware into system racks and appropriately labeling it

This discipline focuses on mounting flat panel displays to mounts and affixing mounts to racks

This discipline focuses on mounting speakers to given mounting points as well as installing them

This discipline focuses specifically on cable management and rack layout within a rackmount cabinet

This discipline focuses on ensuring that cables are tidily routed through proper hardware in a rack

This discipline focuses on reading diagrams of cabling, server mounting, and other forms of infrastructure

This discipline involves taking the business requirements of an organization and designing the infrastructure to meet them

This discipline focuses on analyzing an organization's voice, video, and data communication needs

This discipline focuses on taking the business and technical requirements for a given system and designing it

This discipline focuses on taking the business need of an organization and designing their infrastructure

This discipline focuses on taking the business need of an organization and designing their infrastructure

This discipline utilizes normalization and other techniques to design an efficient and high performance database system

This discipline focuses on analyzing an organization's data communications needs and planning an architecture to support those needs

This discipline focuses on analyzing an organization's holistic vision for technology use and determining the appropriate technology to support that vision

This discipline focuses on routinely analyzing and auditing deliverables from projects to ensure they meet the requirements of the project

This discipline focuses on maintaining an RDBMS or other database management system in a state of high performance and availability

This discipline focuses on designing a set of standards to be utilized within an organization to ensure consistency and quality of work

This discipline focuses on managing remote and centralized printers that are attached to a network

This discipline focuses on ensuring consistent quality of systems by testing new versions of software and hardware

This discipline focuses on coordinating any change in the IT services pipeline with other groups within the organization

This discipline focuses on taking historical data from systems and changes and designs set of standards to be utilized within an organization

This discipline focuses on ensuring consistent quality of systems by testing new versions of software and hardware

This discipline focuses on installation of the physical cabling infrastructure necessary for a network

This discipline focuses on installation of security camera systems to ensure reliable video surveillance

This discipline focuses on installation of technical systems which enhance the learning experience of students

This discipline focuses on the design and support of the GNU/Linux operating system and applications

This discipline focuses on the design and support of the Apple OSX and iOS operating systems and applications

This discipline focuses on the design and support of Microsoft Windows operating system and applications

This discipline focuses on the design and support of the Oracle Solaris operating system and applications

This discipline focuses on analyzing an organization's data communications needs and planning an architecture to support those needs

This discipline focuses on the design and support of "multi-head" clustered computing systems

This discipline focuses on the design and support of current VoIP and legacy circuit-switched telephony systems

This discipline focuses on the continued monitoring and profiling of given systems in order to ensure they are secure and available

This discipline focuses on the design of strategic visions for the direction of security sections within an organization

This discipline focuses on developing and auditing policies designed to avert or mitigate risk to an organization

This discipline focuses on remediating cybersecurity threats, failures, and incidents, investigating the root cause of the problem

This discipline focuses on identifying the inherent cybersecurity risks in a given set of IT systems and applications

This discipline focuses on development of policies for the secrecy level classification of data and information

This discipline focuses on intentionally trying to compromise the security systems of an organization in order to gain access to sensitive information

This discipline focuses on developing practices and technical mechanisms to secure an organization's information assets

This discipline focuses on studying current and developing new access control methodologies and technologies

This discipline focuses on ensuring the technical security of a given network by deploying and configuring firewalls, intrusion detection systems, and other security devices

This discipline focuses on taking the strategic security vision for an organization and business and translating it into a set of actionable tasks

This discipline focuses on managing mechanisms in which a customer proves their identity to a system or service

This discipline focuses on deploying and implementing systems to protect the contents of a network or system

This discipline focuses on ensuring health care records and other information is only accessed by authorized personnel

This discipline provides emergency services to help restore the business activities of an organization

This discipline provides services to transform data in one format to another dissimilar format

This discipline provides services to house, protect, and maintain IT assets

This discipline provides services to audit the security and resiliency of major infrastructure

This discipline focuses on using mass scanning tools and other methods to identify current vulnerabilities

This discipline focuses on intentionally trying to compromise the security systems of an organization

This discipline audits and tests the holistic security program to ensure its effectiveness against threats

This discipline focuses on identifying the inherent cybersecurity risks in a given set of IT systems

This discipline focuses on intentionally trying to compromise the security systems of an organization

This discipline focuses on auditing and testing security practices and procedures to ensure compliance

This discipline focuses on providing support for Microsoft's Office product line and its associated applications

This discipline focuses on the design and support of Microsoft Windows operating system

This discipline focuses on design and support of mobile hardware such as laptops and convertible tablets

This discipline focuses on design and support of PC peripherals attached to an individual PC

This discipline focuses on deploying client machines in a quick and efficient manner
