# HI-PE Plus

## EVENT SECURITY MULTI-ZONE METAL DETECTOR

- Accurate Detection of all Metallic Threat Items
- High Discrimination and Throughput
- Exceptional Immunity to external interferences
- Compliant with and Certified to the strictest Security Standards for weapons detection
- Unmatched Reliability
- Rapid Installation
- Panel Design

### 60 LOCALIZATION ZONES

- 20 VERTICAL
- 3 LATERAL

[www.ceia-usa.com](http://www.ceia-usa.com)

*Threat Detection through Electromagnetics*

**Metal Detectors for event security have to offer extremely high performance in terms of detection capability and transit flow, and need to be particularly compact to allow them to be transported, installed and, at the end of the operation, removed easily.**

## BENEFITS

VERY HIGH  
THROUGHPUT

- Cutting-edge discrimination technology allows personal effects to be ignored, creating rapid transit flow

The transit volume magnetic scanning system, invented by CEIA and applied since production of the first zonal Metal Detectors in 1986, allows state-of-the-art detection and discrimination results.

The HI-PE Plus has a very low nuisance alarm rate even at the strictest Security Levels requested today, and therefore allows high transit flow rates and the minimum need for intervention by security personnel.

**ALARM**

**NO ALARM**

**60 LOCALIZATION ZONES WITH LEFT, CENTER AND RIGHT INDICATION**

The **HI-PE Plus Multi-Zone Metal Detector** provides accurate detection of all metals, high level of discrimination of non-threat items, full compliance with the latest Security Standards and exceptional immunity to external interferences.

## UNIQUE ALARM SIGNALING

PROGRAMMABLE  
DISPLAY BARS

- 4 Multi-Zone Display Bars, each programmable as entry Stop/Go and/or local alarm indication
- High visibility of the control unit and the zone indication independent from the operator position and the installation environment

The *HI-PE Plus* provides the user with fully-programmable signaling. Both entry-points can indicate with a high level of accuracy, even simultaneously, the vertical and lateral areas of transit of the threats detected, and can also be configured as 'traffic lights' to control transits through the detector.

INTENSITY  
LEVELS

- Flexible Acoustic Alarm Signaling System:

- ✓ 10 Continuous and Pulsed Tones
- ✓ 34 Special Sounds

- 10 Alarm Volume Levels

A complete acoustic alarm system allows personalization of the alarm tones and volume, with a wide choice of continuous, pulsed and special tones. The wide volume control dynamic allows operation even in very noisy environments.

BIDIRECTIONAL  
COUNTER

- High Precision Transit Counter:

- ✓ In-Bound Transits
- ✓ Out-Bound Transits
- ✓ Alarm Rate
- ✓ Automatic Compensation for repeated transits of the same person

The Metal Detector provides an automatic count of the people passing through the detector in both directions and the related nuisance alarm percentage.

Accurate signaling is essential for best operation and flow management.

### HIGH PRECISION TRANSIT COUNTER

Two photocells fitted into the archway allow counting of transits, alarms and percentage of alarms.

## Setting the Security Levels could not be easier and more versatile than in the HI-PE Plus.

Users can choose directly from the known International Standards or request implementation of a Standard personalized to their own requirements. Users can also create their own program and save it in internal memory for later use.

### POWERFUL AND VERSATILE SECURITY FEATURES

SECURITY LEVELS

- Up to 50 built-in Security Programs

## PD140E New Generation

### COMPACT HAND HELD DETECTION SET

The **PD140E** is a Hand Held Metal Detector that combines high reliability and ergonomics with advanced detection and operator signaling features.

Effective sensitivity to all metals, full compliance with the latest Security Standards and high immunity to external metal masses are among the main peculiarities of this device.

#### ✓ COMPACT, ELEGANT, ROBUST AND ERGONOMIC

The **PD140E** features a special ergonomic design consisting of an offset hand grip which ensures that the operator's hand does not interfere with the sensitive detection area. Special care has gone into the mechanical design of the detector. Absence of sharp edges or corners allows the detector to be passed smoothly over the inspected area without getting caught in buttons, buckles, folds or other parts of clothing.

#### ✓ NIJ STANDARD 0602.02 COMPLIANT

The technical features of the detector comply with the NIJ standard 0602.02 and the new NIJ draft standard 0602.03. The **PD140E** has uniform sensitivity to magnetic and non-magnetic targets including those made of stainless steel. At the same time the detector offers excellent body-effect compensation and has high immunity to external disturbance from electromagnetic and mechanical sources.

#### ✓ FULL DIGITAL DESIGN

The **PD140E** is fully digital. Electronic functions include a magnetic field transmitter-receiver based on Digital Signal Processing [DSP] technology. This design, combined with a special printed antenna, ensures consistent performance, very high reliability and calibration-free operations.

#### ✓ LATEST PLASTIC MATERIALS TECHNOLOGY

The metal detector casing is made from next-generation technical polymers. These plastics offer high chemical resistance and mechanical strength ensuring a long detector life even in heavy duty conditions.

#### ✓ ADVANCED ALARM INDICATION

The alarm signalling modes include: optical alarm proportional to the intensity of the detection signal; acoustic alarm with a tone which is proportional to the size of the object detected; vibration alarm signal.

### HIGH SENSITIVITY

- Quick, accurate analysis of all parts of the body of people in transit, from the shoe level to the crossbar
- Built-in programs to screen visitors and staff for weapons and contraband
- Met-Identity technology for Identification of Threat Composition
- Accurate pinpointing of individual and multiple metal targets

A full-height light bar displays the location of the detected metal masses in transit. This results in **rapid identification of threats** and a reduction or elimination of the need for manual searches.

### HIGH THROUGHPUT

- Cutting-edge discrimination technology allows personal effects to be ignored, creating rapid transit flow
- No need to remove items such as belts, coins, keys, jewelry, watches, wallets, etc.

The transit volume magnetic scanning system, designed by CEIA and applied since production of the first zonal Metal Detectors in 1986, **allows state-of-the-art detection and discrimination results**.

The SMD600 Plus has a very **low nuisance alarm rate** even at the strictest Security Levels requested today, and therefore allows **high transit flow rates** and the minimum need for intervention by inspection personnel.

UNIFIED CONSTRUCTION  
FOR **INDOOR** AND  
**OUTDOOR** USE
