

For 2022, **GO** is offering the State of Oklahoma a 15% discount off our standard rate. **GO** encourages a review of the bios of our consultants to understand the level of experience that we bring to your team. **GO** will use the following fixed firm pricing for agencies requiring security services from our cybersecurity experts. Custom quotes require **GO** to have a scoping call to collect necessary details to calculate engagement costs, inclusive of tool costs, when applicable.

Product Line/Service	Standard Rate	SW1042 Rate
<b>Virtual CISO SERVICES</b>		
Cybersecurity Risk Assessment/Analysis	Custom Quote Required	~15% discount
Compliance Gap Assessment (e.g., HIPAA, NIST, PCI)	Custom Quote Required	~15% discount
Cybersecurity Audit (e.g., NIST, OK Senate Bill 584)	Custom Quote Required	~15% discount
Security Awareness Training	Custom Quote Required	~15% discount

<b>PENETRATION TESTING (includes testing, analysis, report writing, and remediation validation)</b>		
<b>GO's Philosophy</b> - Hackers do not limit their attacks to certain IP addresses, so your penetration test should include all assets. <b>GO's</b> approach to penetration testing is to evaluate the entire network (not just selected IP addresses) to better simulate the hacker's perspective. Our best findings are often found on the devices that IP count-focused pen test providers exclude from their scope. <b>GO</b> scopes penetration tests based on the number of days of active testing. A standard penetration test of a moderate sized network may include one (1) day of external testing and three (3) days of internal testing. The number of days a test should run is dependent on the size of the network and the goals of the penetration test. <b>GO</b> is happy to advise agencies to find the right duration for the test to run.		
Network Penetration Testing – 2 days of testing	\$ 13,500	\$ 11,475
Network Penetration Testing – 3 days of testing	\$ 20,025	\$ 17,021
Network Penetration Testing – 4 days of testing (**most popular**)	\$ 25,050	\$ 21,293
Network Penetration Testing – 5 days of testing	\$ 32,475	\$ 27,604
Network Penetration Testing – More than 5 days of testing – Custom Quote Required	Custom Quote Required	~15% discount
Wireless Network Penetration Test - 1 physical site, up to 4 SSIDs	\$ 6,300	\$ 5,355
Spear Phishing Campaign - One tailored credential theft campaign	\$ 4,800	\$ 4,080

**WEB APPLICATION PENETRATION TEST (includes testing, analysis, report writing, and remediation validation)**

Web application penetration tests are designed for custom developed applications that incorporate user authentication and is most appropriate where the agency has control of the source code and can make changes to address weaknesses identified. Please note, unauthenticated testing of web applications is incorporated into our standard Penetration Testing processes (see the PENETRATION TEST section above). Web application penetration tests answer questions such as, "Can User A access User B's data?", "Can a standard user subvert the application or gain access to administrative functionality?". Testing includes the OWASP Top 10 web application vulnerabilities plus more. A scoping call will be required to validate complexity for each in-scope application.

Simple Application - Web applications consisting of up to five (5) critical security functions (e.g., login, logout, forgot password, process order, send message) and testing performed from a single user role.	\$ 13,335	\$ 11,335
Moderate Complexity Application - Web application testing of up to two (2) user roles with up to ten (10) critical security functions.	\$ 18,900	\$ 16,065
Larger, More Complex Application	Custom Quote Required	~15% discount

**VULNERABILITY ASSESSMENT (includes testing, analysis, and report writing)**

**GO** will take the auditor's perspective and use credentialed vulnerability scanning to identify the critical vulnerabilities affecting your information systems. This white-box view allows **GO** to see all vulnerabilities including missing patches, configuration weaknesses, and other security hardening opportunities. This is most appropriate for organizations who have already done a Penetration Test and have the IT manpower to address all vulnerabilities.

Network Vulnerability Assessment – Up to 25 IPs	\$ 7,300	\$ 6,205
Network Vulnerability Assessment – Up to 50 IPs	\$ 9,800	\$ 8,330
Network Vulnerability Assessment – Up to 75 IPs	\$ 11,100	\$ 9,435
Network Vulnerability Assessment – Up to 100 IPs	\$ 12,400	\$ 10,540
Network Vulnerability Assessment – Greater than 100 IPs	Custom Quote Required	~15% discount

**VULNERABILITY MANAGEMENT (includes periodic credentialed scanning, Top 5 reporting, and review meetings)**

**GO's Philosophy** - Vulnerability management works best when IT teams are focused on a small number of incremental improvements and have accountability. **GO's Red Team** of expert penetration testers identify and analyze your vulnerabilities, assess exploitability, and prepare a monthly Top 5 report to keep you focused on your most pressing vulnerabilities. Monthly review meetings keep your IT team engaged, accountable, and not stuck on roadblocks. This allows IT teams to stop managing vulnerability scanners and to start remediating critical vulnerabilities. Monthly Vulnerability Management includes twelve (12) rounds of vulnerability scanning, reporting, and meetings during the year. Quarterly Vulnerability Management includes four (4) rounds.

Monthly Vulnerability Management - 1 year term ( <b>**most popular**</b> )	\$ 16,200	\$ 13,770
Quarterly Vulnerability Management - 1 year term	\$ 6,000	\$ 5,100
